Retrieved 21 June Identifying the employees, machines, equipment, and processes included in the program.

Padlocks can help improve workplace safety by controlling access to... You can create or enhance a training program by using some of the training DVDs, handbooks and posters that are currently available. Employer procedures and training for such removal must have been developed, documented and incorporated into the employer energy control program.

The locking and tagging of the isolation point lets others know not to de-isolate. Instructions will identify how the lockout process is to be carried out in a step-by-step manner including how stored energy is controlled and de-energized, how isolation can be verified, and how and where lockout devices are installed. To emphasize the last step above in addition to the others, the entire process can be referred to as lock, tag, and try that is, trying to turn on the isolated equipment to confirm it has been de-energized and cannot operate.
