I couldn't find a way to edit a post, so I'll correct it. In the past 12 hours or so, I've started getting continuous low memory warnings.

I think we need to make sure what storage areas we're talking about: Still Love

I suspected the USB hub might be part of the problem. When the computer is turned off, the data in RAM is lost. You need a functional computer, not a super-fast setup.

Also would be nice to know the threshold for storage. I have spent hours trying to find an answer, but other than move or delete apps, I've seen nothing helpful. Delete some files to free space".
