Cells that weren't decimated outright showed signs of DNA damage that could lead to cancer or neurodegenerative diseases if not repaired, the researchers wrote. Moon said after his Pyongyang trip that Kim was hoping for another summit with Trump "at an early date". Rather than shuttering outdated testing facilities, North Korea needed to modernize. For starters, it's sharp. BBC stated that China landed its first robotic rover, Yutu, on the moon. The company will use the extra space to store a lot of food, water, fuel and spare parts. Cells that weren't decimated outright showed signs of DNA damage that could lead to cancer or neurodegenerative diseases if not repaired, the researchers wrote. A recent study published in the A Dangerous Moon issue of the journal GeoHealth examined exactly how dangerous that dust can be on a cellular level – and the results are as ominous as the dark side of the moon.
