Synopsis "This thorough text examines the concept and its applications, beginning with the basics of thermodynamics in which all energy-related variables are based and continuing into relevant aspects of industrial development, psychrometric processes, heat pump systems, thermal energy storage and drying processes and systems, and renewable energy systems. A total of 70 water samples were collected from purposively selected boreholes, springs, wells and rainwater in Nyamitanga, Kamukuzi and Kakoba divisions of EXERGY: Energy municipality with various human activities.
