While at rest, most sharks pump water over their gills to ensure a constant supply of oxygenated water. The great white and other large predators either swallow small prey whole or List of Shark Facts huge bites out of large animals. In these cases, teeth are small and not used to consume or catch their food.

While there are ferocious species like the great white, there are gentle giants. The respiration and circulation process begins when deoxygenated blood travels to the shark's two-chambered heart. Vertebrate Life 7th ed.

Burgess the former [ ] director of the International Shark Attack File "described the small number of teeth found together, it is most likely that Cladoseleache did not replace its teeth as regularly as modern sharks. In most species, teeth are replaced one at a time as opposed to the simultaneous replacement of an entire row, which is observed in the cookiecutter shark.
