Developers who intend to build apps that will use the ethereum blockchain. Nodes spread bitcoin transactions around the network. The third line converts the chosen amount to the network's base unit wei.

Those rates have been defined by Satoshi Nakamoto, the creator of Bitcoin, in 2009. This made mining something of a gamble. As more miners join, the rate of block creation increases. Blockchains, though, introduce an entirely new way of record-keeping, one where the entire network, rather than an intermediary, verifies transactions and adds them to the public ledger.

Although ethereum is looking into other methods of coming to consensus about mining hardware. How do I send ether using the command line?
