High-tech, high-skill industries such as semiconductors and software should have more skill development with lower turnover and higher wages than a low-skill service industry such as food stores and a low-skill infrastructure industry such as trucking, which differs again from a high-skill infrastructure service industry such as financial services. Comments and reviews What are comments? The following chapters explain the basic results in much more .

This single location in South Australia: This text may be used and shared in a classroom. Basing their argument on an up-close look into the dealings and practices of five key industries - financial services, retail food services, trucking, semiconductors, and software - the authors demonstrate the resiliency of most workers and firms by turning turbulence into new opportunities. It documents the consequences of the birth and death of firms on the wages and careers of workers. The decline is larger in semiconductors, software, and financial services and smaller in retail food and trucking.

The authors of Economic Turbulence do a wonderful job of looking at the real data and showing substantial differences across industries—one size does not fit all. Click here Do you believe that this item violates a copyright?
